### MAKES & SPECIFICATIONS OF MATERIAL

**IRON REMOVAL MEDIA:** Make : **Purolite** MZ10 Plus is a black catalytic media used for removing soluble iron, manganese, hydrogen sulfide, arsenic and radium from water supplies. The media has unique characteristics in addition to its catalytic property which facilitates the oxidation reduction reaction of iron and manganese. Purolite catalyst technology is a proven technology for iron and manganese removal. Purolite MZ10 Plus can be used at high operating temperatures and high differential pressures without breakdown of the media and is classified as a "high rate" media where the filters can be run at very high linear velocities with excellent results. Unlike other medias, it does not require extensive pre-conditioning. Catalytic Oxidation operation involves feeding of a predetermined amount of chlorine as far upstream as possible to the filter to allow for sufficient contact time. Sufficient residual of chlorine at the outlet of the filter will maintain the catalytic media in continuously regenerated condition. The amount of chlorine dosing will depend on the amount of iron, manganese and hydrogen sulfide present in the feed water. The nodular shape and the controlled grading of the granular media, together with its ruggedness and durability provides for excellent filtration efficiency, even after years of continuous service.
